## **Aerith Corp Advances to Quarter-Finals in National Search for Top Fundable Startups**

**LOS ANGELES — April 9, 2026** — Aerith Corp has secured a coveted position in the quarter-finals of the 2026 Pepperdine Graziadio Business School Most Fundable Companies competition. This advancement places the Los Angeles based startup among the top echelon of thousands of applicants evaluated across the United States.

Aerith Corp produces the software architecture necessary to move visual media from flat screens into true holographic space. The company is creating its proprietary Aerith Visualization Engine (Avé) to achieve real-time imaging with total fidelity.

Pepperdine's selection process mirrors the rigorous due diligence performed by professional venture capitalists. The expert panel evaluates startups on financial projections, market opportunity, and management expertise. This recognition confirms that Aerith Corp meets the high bar for sustainable growth required by institutional-grade scoring models.

The quantum computing sector is experiencing massive expansion with global investment exceeding \$33 billion. Aerith Corp leads this movement as the first mover in commercial quantum imaging. The company maintains a software-only stance to remain entirely hardware-agnostic. This strategy allows Aerith applications to work natively on the new machines expected as early as 2028.

Cofounders Diamond Monique Washington and Shadow Dragu-Mihai plan to scale the Avé platform globally following a \$25 million seed round. Investors can view the operational roadmap and request subscription agreements at the company website.
